ANALYSIS PROBLEM # 35

Name: _____ Period: _____ Row: _____ Date: _____

PROBLEM THIRTY FIVE: Calendar Trivia: The calendar has been around for a long time and has been an important part of our daily lives.

The calendar evolved from the early Roman calendar which had ten months and a total of 304 days. Eventually two additional months were added, bringing the total days to 365. Adjusting and correcting the calendar has been a centuries-long endeavor that to some extent is still ongoing.

An interesting fact about the calendar is that by taking the first letter of five consecutive months it spells out a popular name for a boy.

What is the boy's name?
